

BPR (Biocidal Products Regulation) Commitment to conformity **Version 17/01/2020**

REFERENCE: *European Biocidal Products Regulation No 528/2012, concerning the marketing and use of biocidal products, which are used to protect humans, animals, materials or articles against harmful organisms such as parasites or bacteria, by the action of active substances that are contained in a biocidal product.*

Dear customer,

In order to protect our articles and to provide their durability, we can treat them with biocidal products which contain active substances, as approved or under approval by the EU, for the preservation of textile materials.

The regulations relating to biocidal products (BPR) requires that the manufacturers and importers of articles which are treated, label the treated articles in the following cases: (article 58, paragraph 3)

- a claim is made by the manufacturer of that treated article regarding the biocidal properties of the article;
 → *We do not market any article with biocidal properties*
- This is stipulated in the conditions of approval of the active substance which is contained in the biocidal product used for treating the article.
 → *None of substances having been used carry any obligation of notification in their conditions of approval.*

Hence, our articles have no mandatory labelling.

However, upon your request and in compliance with the consumer rights, you will find information below on the biocidal treatment of the articles we are marketing.

Our articles contain a fungal protection suitable for their application, which can contain the substances listed below:

4,5 dichloro-2-octyl -2H-isothiazole-3-one DCOIT / CAS number 64359-81-5
N-(trichloromethylthio)phthalimide (Folpet) / CAS number 133-07-3
3-iodo-2-propynylbutylcarbamate (IPBC) / CAS number 55406-53-6
Pyrithione zinc / CAS number 13643-41-7
2-octyl-2H-isothiazol-3-one (OIT) / CAS number 26530-20-1

However, we cannot exclude the possible presence of other biocidal substances in low concentrations on the order of ppm, incorporated into the raw materials for their preservation prior to use.

Your sincerely,

Xavier CHRISTOPHE
